| Team ID   | PNT2022TMID01454   |  |
| Project Name  | Project – Smart farmer-IoT enabled<br>Smart farming application. |  |
| Maximum Marks                                       | 4 Marks  |  |

## Functional Requirements: Following are the functional

requirements of the proposed solution.

| FR<br>No. | Functional<br>Requirement (Epic) | Sub Requirement (Story / Sub-Task)    |
|-----------|----------------------------------|---------------------------------------|
| FR-1      | IoT devices                      | Sensors and Wi-Fi module.             |
| FR-2      | Software                         | Web UI, Node-red, IBM Watson, MIT app |
|           |                                  |                                       |
|           |                                  |                                       |
|           |                                  |                                       |
|           |                                  |                                       |

## Non-functional Requirements: Following are the non-functional

requirements of the proposed solution.

| FR        |                |  |  |
|-----------|----------------|--|--|
|           | Non-Functional | Description  |  |
| No.       | Requirement    | irement  |  |
| NFR-<br>1 | Usability      | Time consumability is less, Productivity is high.                        |  |
| NFR-<br>2 | Security       | It has low level of security features due to integration of sensor data. |  |
| NFR-<br>3 | Reliability    | Data is more accurate and hence it is Reliable.                          |  |
| NFR-<br>4 | Performance    | Performance is high and highly productive.                               |  |
| NFR-      | Availability   | With permitted network connectivity                                      |  |

| 5         |             | the application is accessible                              |
|-----------|-------------|--|
| NFR-<br>6 | Scalability | It is perfectly scalable many new constraints can be added |
